

AccuFrame[®] Plus

Implant Framework

Introducing the first and only colorized milled titanium bar and framework system.

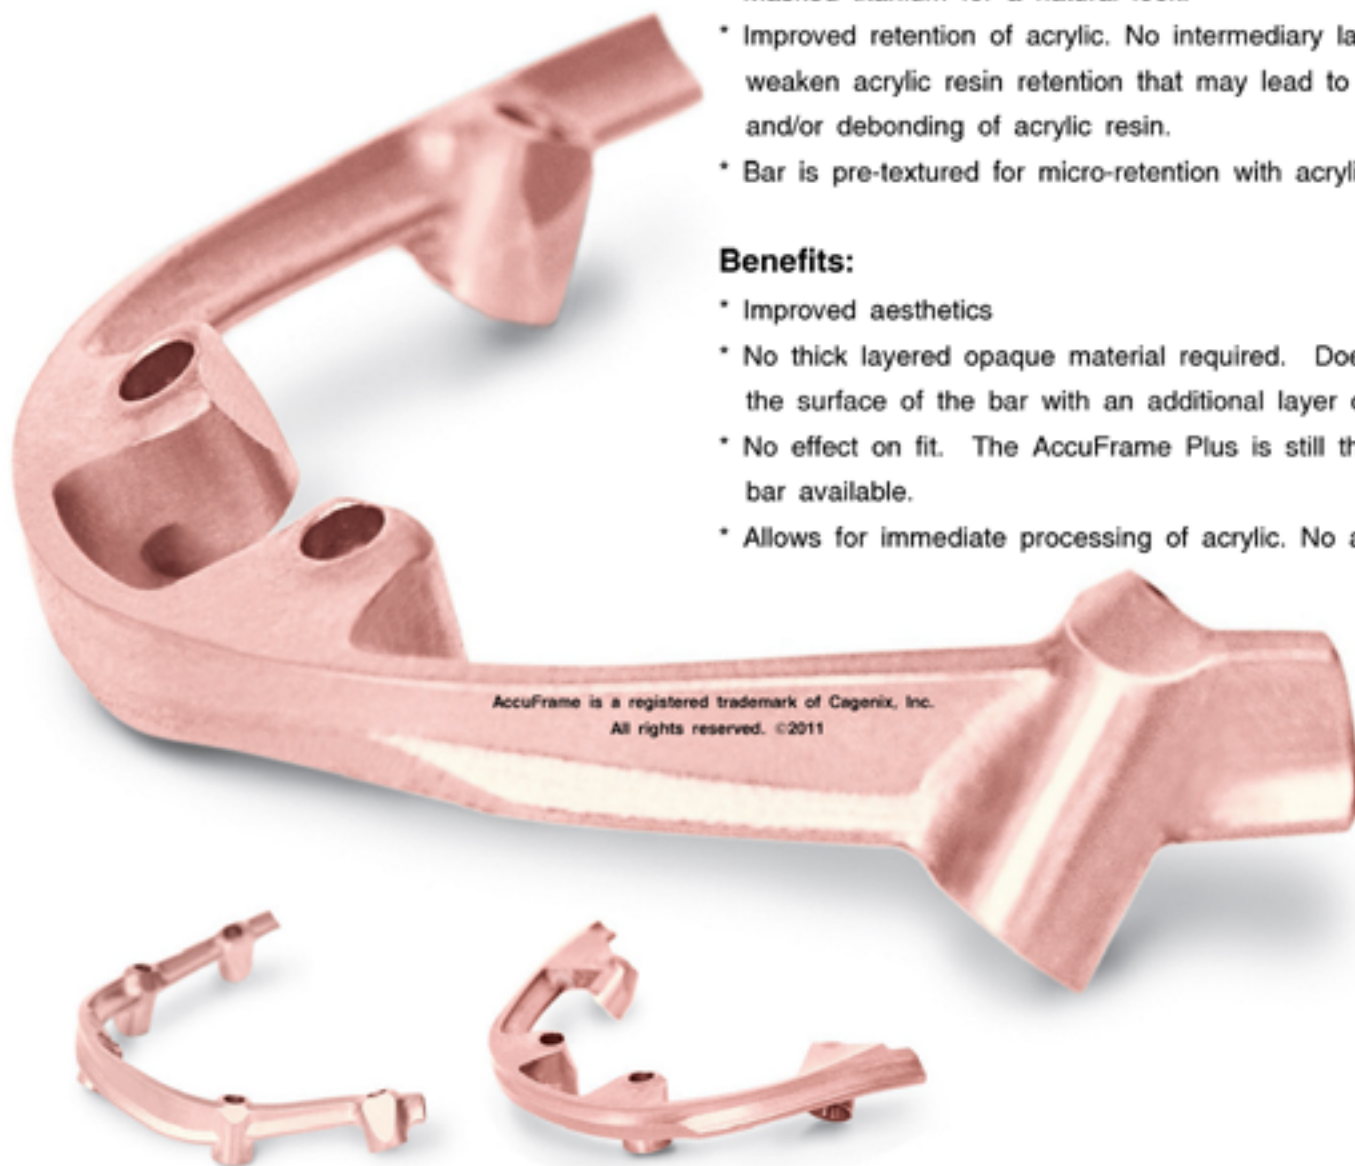

AccuFrame Plus a process that provides you a bar and framework solution with a masked, natural color along with a micro-retentive surface. The bar has a natural, tissue color that will provide a more natural look through all acrylic restorations.

Features:

- * Masked titanium for a natural look.
- * Improved retention of acrylic. No intermediary layer to weaken acrylic resin retention that may lead to chipping and/or debonding of acrylic resin.
- * Bar is pre-textured for micro-retention with acrylic.

Benefits:

- * Improved aesthetics
- * No thick layered opaque material required. Does not change the surface of the bar with an additional layer of material.
- * No effect on fit. The AccuFrame Plus is still the best fitting bar available.
- * Allows for immediate processing of acrylic. No additional steps.
